

ABSTRACT OF THE DISCLOSURE

In order to provide an AC type plasma display panel having improved luminous efficiency, small power consumption and high luminance, sustaining electrodes (14a, 14b) of the AC type plasma display panel take in the form of mesh electrodes each having a plurality of openings (13). Each opening (13) is a strip-shaped opening having a size included in a rectangular area having one of sides thereof smaller than 30 μ m or having a width smaller than 30 μ m.
